

# The Role of Research in the Development of Safety

*Per Seltborg, Swedish Radiation Safety Authority*

- Short perspective on nuclear power in Sweden
  - Currently, some concern about the long-term competence
- Research in nuclear safety of vital importance for
  - Providing actual nuclear safety improvements
  - Sustaining a critical mass of expertise
  - Educating and attracting new students to the nuclear field
- The role of the authority, as well of international collaboration, is maybe of more importance than ever
